

Make every drop count!

# Rain Barrel & Cistern Flow Controls

Simple automatic drip irrigation option to *slow it down, spread it out, and sink it in!*

As long as your barrel is above or level with the discharge target area these simple gravity only discharge options will work.

Slowly discharge stored water so it soaks into the landscape after every winter rain without causing erosion or runoff. Start hoarding water for spring and summer irrigation in mid-March.

## Automatic, timed discharge

Prices subject to change without notice.

Keep shut-off open for timed operation

150H \$1.95

Special battery-powered ball valve timer

(Works with very low pressure)

Requires 4 AA batteries not included

GI9500 \$42.96

Hose thread to pipe thread converter

High quality brass swivel

CH12 \$4.25

Easy to clean filter

Keeps drip emitters from clogging

AM39 \$13.50

3/4" to 1/2" reducer coupling

430C101 \$1.65

1/2" MPT to drip tubing connector

1C705MP \$1.09

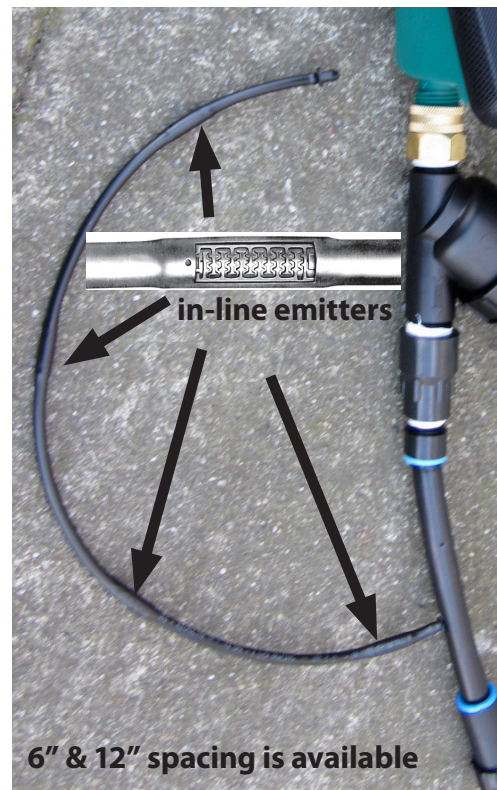

## Manual

Keep shut-off closed when not in use.

## Use standard 1/4" drip emitter line to release water from barrel

The filter keeps standard 1/4" drip emitter line from clogging with dust and sediment from rainwater. Each emitter will release less than the rated 1/2 gallon per hour of timed operation. It's a great way to slow down, spread out, and sink the water into the earth where you want it.
