Our experienced staff can show you how to put together complete projects or improve and update an existing system. Bring a sketch of the yard and we'll help you design a water-efficient system. We have up-to-date information on the latest irrigation technology, including subsurface drip systems for lawns, and the smart new ET controllers that can reduce water usage by 20-50%, without stressing the lawn or plants. We also offer design assistance for pond, fountain, waterfall, and outdoor lighting projects. Our free classes on drip and sprinkler design and installation are scheduled during the spring and summer months.
