Use a FlexiFit diverter to connect to one of drilled ports so when the barrel is full the will overflow down the downspout.

Here’s how:

**Tools needed:**
1. Safety Glasses
2. Safety Gloves
3. Drill
4. Measuring Tape or Ruler
5. Pencil
6. Scissors
7. Phillips Screwdriver
8. Level

**General description:**

Rain barrels have been used for hundreds of years to harvest and store rainwater for use with plants, gardens, and other outdoor chores.

EarthMinded’s DIY Rain Barrel Kit is a state-of-the-art sealed rainwater collection system when used with a barrel or container you supply. Our patented Flexi/Fit™ diverter installs easily by drilling a single hole into any standard 2” x 3” or 3” x 4” rectangular downspout. The diverter sends rainwater into the barrel. Once the barrel is full, the diverter will automatically pass excess water through the downspout.

**Drilling the FlexiFit™ diverter hole:**

Drill a hole in the downspout using the (LARGE) 2 1/8” hole saw. The center bit of the hole saw should align with the center mark on the downspout.

- a. Do not force the hole saw. Cut slow and steady keeping a firm hold on the drill.
- b. Always use safety glasses and gloves when cutting or drilling.
- c. The cut edges of the downspout can be sharp. Wear protective safety glasses and gloves when handling.
- d. For 3” x 4” downspouts make sure you drill the hole on the narrow 3” side.

**Installing the FlexiFit™ diverter:**

1. Insert the diverter into the hole in the downspout by squeezing the sides and pushing the diverter into the downspout until the flange sits flat against the downspout. Do not twist the diverter when installing - push it straight in - with the cup facing up at all times to insure a proper seal. Make sure that the arrow on the front of the diverter is installed pointing straight up.
2. Use (2) of the self-tapping screws to attach the diverter to the downspout.
3. Connect the fill hose to the cuff end of the Flexi/Fit™ diverter. Press the hose into the diverter until the corrugated section is flush against the diverter. Use soapy water or hand lotion on the hose cuff and seal to reduce friction and improve fit.

**Connect tubing from diverter to one of barrel overflow ports.**

**Important:** If you are not linking the second overflow to another barrel, the second overflow port should be closed (not drilled).
