

The Urban Farmer Store's

part #
FFKIT

3" First Flush Diverter Kit

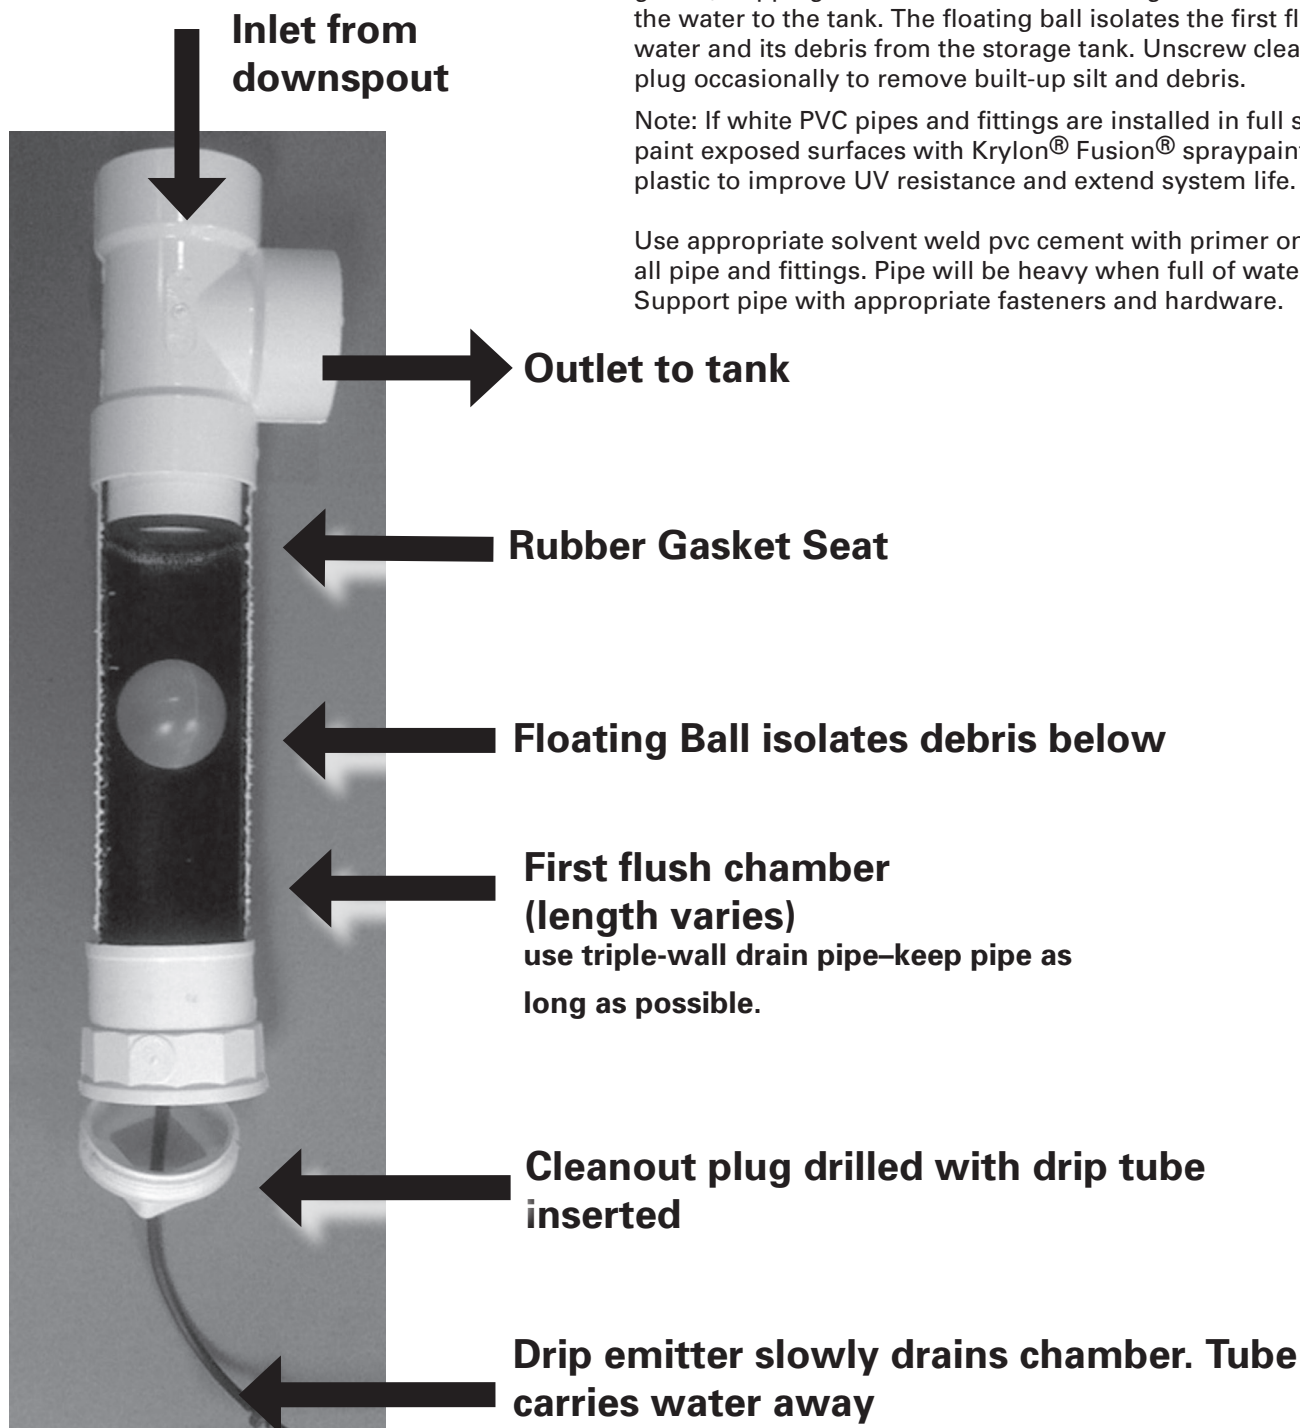

for rainwater harvesting applications

Triple Wall Drainage pipe recommended and is not provided IMPORTANT: USE PRIMER

As the chamber fills, the ball floats up and seals on the seat gasket, trapping first-flush water and routing the balance of the water to the tank. The floating ball isolates the first flush water and its debris from the storage tank. Unscrew cleanout plug occasionally to remove built-up silt and debris.

Note: If white PVC pipes and fittings are installed in full sun, paint exposed surfaces with Krylon® Fusion® spraypaint for plastic to improve UV resistance and extend system life.

Use appropriate solvent weld pvc cement with primer on all pipe and fittings. Pipe will be heavy when full of water. Support pipe with appropriate fasteners and hardware.
